DESIGN PROCEDURE

- From the word description and specifications of the desired operation, derive a state diagram for the circuit.
- Reduce the number of states if necessary.
- Assign binary values to the states.
- Obtain the binary-coded state table.
- Choose the type of flip-flops to be used.
- Derive the simplified flip-flop input equations and output equations.
- Draw the logic diagram.

State Table

Reducing the State Table

	Next State		Output	
Present State	$x = 0$	$x = 1$	$x = 0$	$x = 1$
a	a	b	0	0
b	c	d	0	0
c	a	d	0	0
d	e	f	0	1
e	a	f	0	1
f	e	f	0	1
